VERSION**

N6006

DARING PHOTOGRAPHY

When you're ready to start making the world's greatest pictures, the N6006 is ready for you. With built-in wide-angle flash, motor drive, three light meters, autofocus and an array of other features, the N6006 dares anyone to try new and exciting photographic techniques.

5-SEGMENT MATRIX METERING

The best light meter for action photography, the N6006 uses 5-segment matrix-metering for reliable exposures even in difficult or rapidly changing light conditions. The matrix meter breaks the scene down into 5 segments, evaluates each for brightness and contrast, and provides the correct exposure of the main subject in virtually any lighting situation. In situations where you might be wondering what to do, your N6006 already knows.

SPOT AND CENTER-WEIGHTED METERING

For more controllable situations, or where you want to put more emphasis on a centrally located subject, center-weighted metering concentrates 75% of the exposure on the center of the viewfinder. To concentrate the exposure even further, switch to spot-metering. Now the exposure is based on a 3.5mm-diameter circle in the center of the viewfinder. The spot meter is effective when precise measurement of the subject is required.

BUILT-IN WIDE-ANGLE FLASH

This flash works beautifully with your N6006 light metering systems. Touch the buttons and it pops up, ready for use. This flash offers the widest coverage of any built-in speedlight (covers Nikon lenses down to 28mm). The N6006 flash also packs a wallop, offering a guide number of 43 (with ISO 100 film/feet).

FM2N

THE TRADITIONALIST'S CHOICE

If you want manual focus and manual exposure control, here's the way to get it — with proven Nikon performance and durability. The FM2N is the choice of traditionalists everywhere.

YOU'RE IN COMMAND

The FM2N is a camera that puts you in charge. Using 60/40 center-weighted metering, you select the aperture, you select the shutter speed, to create the type of photographs you're looking for.

LEGENDARY NIKON PERFORMANCE AND DURABILITY

Like all Nikon F cameras, the FM2N is made to exacting standards with durable die-cast metal body construction and precision operating features.

Vertical-travel aluminum alloy shutter curtains offer reliable, consistent performance. A mirror shock absorber virtually eliminates mirror bounce or shake that might blur some exposures. Four ball-bearing clusters and reduced film winding torque assure silky-smooth film advance.

3-POINT LED EXPOSURE DISPLAY

In addition to shutter speed and aperture, a 3-point exposure display appears in the viewfinder. It instantly tells you if your exposure is over (+), under (-) or right on (0).

NIKKOR 35MM LENSES

LIKE NO OTHER LENSES IN THE WORLD

Purchasing a Nikon SLR camera body is just the beginning of your extraordinary adventure in photography. The next step is choosing a lens — or a series of lenses — that will give you the power and flexibility to capture the world in a virtually unlimited number of ways. Nikon offers the largest

selection of interchangeable lenses, from fisheye to super-telephoto. And behind every lens is a history of Nikon quality and innovation that has consistently set new standards of excellence. Nikon technological advances have expanded the photographer's ability to accurately record, or creatively interpret, what he or she sees.

Nikon's most remarkable innovation, however, may be its consistent use of the Nikon F lens mount. Even Nikon's newest and most advanced lenses can be easily attached to the stainless steel F mounts of Nikon cameras dating back to the Eisenhower era. So invest in a Nikkor with confidence.
